GIT 215-64209

I didn't have time to finish the project. One difference I noticed in Microsoft Edge compared to Google Chrome is that I could drag the entire web page. Another difference is that the web page is positioned slightly upwards and more centered in Microsoft Edge compared to Google Chrome. On my iPhone in Safari, the background is not visible on the home page. On the contact, page, the background is noticeable at the bottom of the web page.
